Mothers and Babies Clue Page

Did you know that a baby whale is NOT called a whale, but is called a calf? All babies have different names than their moms. How many do you know? Fill in the names of the babies that go with the moms listed below. If you are correct, you will be able to find the baby's name in the wordsearch puzzle. You may have to do some research if you cannot find your choice! Some animals have the same baby name and some babies are called 2 things. I used each name only 1 time and hid 34 different names in the puzzle. Good luck!
